Office of Coastal Zone Management.

PREFACE

This statistical profile is the result of a project to provide a consolidated collection of available facts illustrating the importance and vulnerability of the coastal zone. It meets a frequently expressed need for quick access to coastal data.

The profile was prepared by two CZIC Summer Interns, Linda Beck and Karin Bishop. My sincere thanks to them, and to Katherine Jameson of CZIC for her invaluable assistance and guidance. Together, they have produced a document of continuing value to OCZM and to many external users.

Vicki A. Allin

REFERENCES

INTRODUCTION

People in general have no notion of the sort and amount of evidence often needed to prove the simplest matter of fact.

Peter Mere Latham

"Facts" about the coastal zone abound. Unfortunately, many of the figures quoted seem to appear from nowhere and cannot be traced to a reliable source. The purpose of this profile is to provide evidence supporting frequently cited, often common-sense coastal zone "facts". For example: 30 of the 50 states have some shoreline, so logically there will be more people living in coastal than non-coastal areas. Less obvious are the higher population densities and growth rates of coastal areas.

A major problem was identifying the actual area to be studied. There are almost as many definitions of the "coastal zone" as there are states and territories involved with CZM. For the purpose of this project, the coastal zone is considered to be the first tier of coastal counties. This definition was chosen as a clearly identifiable region for which data could be presented. In addition, the Bureau of Census, which collects useful economic as well as population data, works at the county level.*

Another problem is that much available information is incomplete, non-comparable, or dated. As this profile is intended for use mainly at the Federal CZM level, generalized data collected at the nation level was chosen over more detailed studies available for only a few states or regions.

*Much of this information can be extracted in useful form only on special contract with Census. Such a contract might be considered as a future project.

Unfortunately, some of the national level studies, such as the U.S. Army Corps of Engineers National Shoreline Survey compiled in 1971, are rather old and have not been updated. Figures from the Census Bureau are based on 1970 data. In each case, the most current information available has been used.

Two intuitive "facts" supporting CZM are the inherent instability of shoreline areas and the concentration of development in this same fragile zone. A general introduction to the U.S. coast --what it is, where it is, who owns it and what it is used for-- is provided under Geography. Natural threats accompanying coastal resources --erosion and hurricane/storm surge-- are described under the Hazards section. Wetlands and Barrier Islands are particularly sensitive areas.

There are several sources for the increasing stress of the coastal zone. Population growth and migration trends continue to concentrate the nation's people on the ocean and lake shores. Economic activity in the coastal zone is increasing. Port and fishing industry statistics reflect an overall increase in commercial development, drawing on both land and water resources.

What is included here--does not provide an up-to-the-minute, detailed photograph of the coastal zone. Rather, it is a compilation of general, readily available statistics, information to support the need for CZM.

August 14, 1979

COASTAL ZONE

GEOGRAPHY

Thirty-five coastal states and territories give the US 85,030 miles* of ocean and lake shoreline. Of this, the Federal government owns 45,522 miles (53.5%). State and local governments hold another 10,200 miles (12%) for public use, while private interests control 26,800 miles (31.5%). Ownership of the remaining 2,705 miles (3.2%) is undetermined.

A general breakdown of shore uses shows that the majority --81.6% (69,395 miles)-- of the total US coastline is undeveloped. Recreation is the prevalent use of the remaining land, with 3,466 miles (4.1%) available to the public and another 5,805 (6.8%) developed for private use. The remaining 6,364 miles (7.5%) have been developed for non-recreational purposes.

NOTE:-

Alaska alone accounts for 56% of the total US coastline and may distort statistics for other areas of the US coastal zone. Excluding Alaska, the Federal Government owns 4,019 (10.6%); public, non-Federally owned land amounts to 4,705 (12.5%) and 26,299 miles (69.4%) are privately owned. Ownership of 2,704 miles (7.2%) is uncertain.

Shore use statistics are also altered by excluding Alaska: 3,465 miles (9.1%) are available for public recreation. Private recreation accounts for 5,805 miles (16%). Non-recreational development takes up 6,064 miles (16.2%) of coast, and 22,394 miles (59.4%) are undeveloped.

*All figures are taken from the US Army Corps of Engineers National Shoreline Study, 1971. OCZM uses a different set of figures, compiled by NOAA, for the section 305 allocation formula. NOAA figures are included in a separate table. All ownership, land use, and erosion calculations are based on the more detailed Corps' study.

POPULATION

As of 1978, over 40% of the nation's population lived in state-designated coastal counties. A radically different figure emerges when another definition of "coastal zone" is used. According to the Bureau of the Census, the coastal region includes all counties which lie completely or partially within fifty miles of the shore. Under this definition, 107 million people live in the coastal region; over 50% of the nation's population is concentrated in 8.2% of the land area.

Further evidence of the preference for coastal areas is found in the comparison of average population density: 304.8 per square mile for shoreline counties, 67.8 per square mile for the US as a whole. Population trends reinforce this impression. Growth rates for coastal and inland areas differ sharply, as between 1960 and 1970, when the population of the nation showed an average annual increase of 13.3%: 15.5% for coastal counties, 9.3% for interior areas.

Until quite recently, migration patterns have supported this growth trend. From 1940-1970, there was a continual population drain from interior areas, while coastal states consistently attracted immigrants. Between 1970 and 1974, the Pacific and Gulf Coasts continued to grow at a rate well above the national average, but population of both the Great Lakes and Atlantic regions, while still showing an overall increase, grew at a rate below that of the nation as a whole.

For an indepth discussion, see Anthony Fedler, The US Coastal Population: Analysis of State, Regional, and National Growth Trends, a master's thesis submitted to Texas A & M University.

ECONOMIC ACTIVITY

The economy of coastal areas is, except for a slight emphasis on ocean related uses, a microcosm of the nation's economy. Since 1950, over 40% of the nation's industrial employment has been located in the coastal zones,¹ between 1975 and 1980 projected growth of all industry located in the coastal zone is 14.1%.²

The development of industries peculiar to the coast is expected to be even more rapid. Operational industries, including ports and harbors, are expected to expand by 18.3%;² by 1985 an additional 1.75 billion dollars will be invested in their development.³ By 1980 it is anticipated that 9.8% more employees will be needed to take advantage of marine resources.² Aquaculture facilities, which already account for 10% of the world's fish and shellfish catch, are expected to be increasingly important, with the possibility of increasing production of certain species by 684% by 1990.⁴

For more information on ports, the U.S. DOC - Maritime Administration has recently published a pamphlet called Economic Impact of the U.S. Port Industry: An Input-Output Analysis of Waterborne Transportation; see also Under New Management: Port Growth and Emerging Coastal Management Programs by Marc Hershman. A bibliography on ports and related studies is available through CZIC. Data on the Fishing industry can be found in the NMFS Statistical Digests.

A more detailed analysis of coastal industry may be found in the County Business Patterns publication put out by the U.S. Bureau of the Census. Information on establishments, payroll and employment is presented for the

1/ Coastal Zone is defined as those counties contiguous to the oceans, Great Lakes or their estuarine arms.

... a foolish man, which built his house
upon the sand.

And the rain descended and the floods came,
and the winds blew, and beat upon that house, and
it fell, and great was the fall of it.

Matthew 7:26-27

COASTAL ZONE HAZARDS

EROSION

Erosion is an important factor contributing to the inherent instability of the coastal zone. According to the US Army Corps of Engineers, 3% of the US coastline (2,560 miles) is subject to critical erosion. Non-critical erosion affects 19.9% (16,920 miles) of all coastal areas. The remaining 69.7% (59,286 miles) is made up of stable, non-eroding areas such as non-beach shoreline or land that is accreting sediment.

Erosion damage is linked to shoreline type. The North and Mid-Atlantic regions, those having the highest percentage rates (11.4% and 10.6% respectively) of critical erosion, are largely sand beach; the Pacific region shoreline is mostly cliff or rocky beach, only 0.5% of which is subject to critical erosion.

Figures in this section will not equal figures for the entire coastline, as data for some areas are unavailable.

HISTORICAL SHORE CHANGES

(US Army Corps of Engineers,
National Shoreline Study, 1971)

Total and Average	335,171	9	2,800	3,800	1,528

(1) Water Resource Council regions.

(2) Includes cropland harvested and crop failure. Estimated by the Soil Conservation Service using the Conservation Needs Inventory of 1967 and the Potential Cropland Study of 1975.

(3) Rates and total tons were computed in a model using nationally consistent procedures. The values may differ from some local estimates.

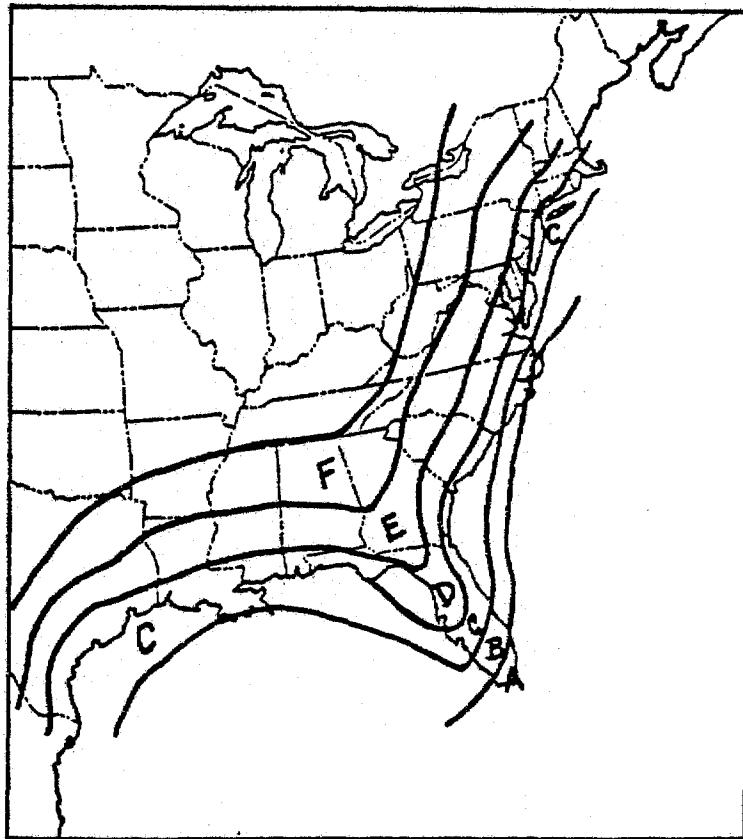

(4) SCP refers to "sustained crop production" standards as determined by the Soil Conservation Service. This level ranges from 1 to 5 tons per acre per year, depending on the soil.

Source: U.S. Department of Agriculture, Soil Conservation Service, Cropland Erosion, 1977, Tables 3 and 8, pp. 17 and 23.

HURRICANE

winds --74 mph or higher-- are a constant threat along the entire Eastern seaboard and Gulf Coast of the US, potentially affecting nearly 100 million people* (50% of the US population). Probability of a hurricane striking the coast from Maine to Texas in any given year ranges from 4% in the North Atlantic region to 8.6% for the Gulf States. (Percentages vary widely for and within individual states.) Between 1900 and 1978, there were 129 hurricanes which, by 1969, had caused 14,075 deaths and over \$8 billion (\$8,650,000,000) in damages. Recent hurricane damages have been small, but there has not been a "great" hurricane (winds of over 110 mph) since Camille struck in 1969. Intensive development in coastal areas increases the likelihood of catastrophic losses in future storms.

*Figures are from Brinkmann and Witterand, Hurricane Hazard in the United States: A Research Assessment. 1975.

ESTIMATED POPULATION AT RISK - HURRICANE/STORM SURGE

HAZARD ZONE		POPULATION AT RISK
A	125 mph or more	14,550,000
B	100 to 124 mph	37,239,000
C	75 to 99 mph	23,770,000
D	50 to 74 mph	20,490,000

Almost 100 million people are exposed to the hurricane wind hazard, or almost half of the total US population. The greatest concentration of population vulnerable to such winds is along the Atlantic coast, where four times as many people reside in zone A as along the Gulf coast.

FROM: Brinkmann, Witterand, Hurricane Hazard in the United States: A Research Assessment. pp. 12-13.

Table 2 - Allocations from the President's Disaster Fund, 1961-1970.

-30 of the 49 states and territories listed as having received aid from the disaster fund have coastal areas.

-631.1 million (82%) of the total 796.55 million dollars distributed went to those coastal areas, compared to 138.45 million (18%) for non-coastal areas.

-the average funding received was 21.03 million for coastal areas, and 7.29 million for non-coastal areas.

 Emergency Preparedness, Washington, DC: January, 1972.

WETLANDS

Critical to the ecological and economic health of the coastal zone, wetlands are among the most vulnerable of coastal resources. 26,618,200 acres* of coastal wetlands --estuaries, salt and freshwater marshes, cypress swamps-- nurture organisms which form the foundations for food webs including coastal and inland waters. Disruptions of wetlands processes will impact far beyond the immediate site of the disturbance. Developers have become increasingly interested in these areas, formerly considered too unstable to sustain development pressure, for both commercial and residential expansion. Between 1955 and 1964 45,000 acres of the wetlands between Maine and Delaware were filled. According to Estuarine Areas: Report of the Committee on Merchant Marine and Fisheries(1967), there are 7,988,100 (30% of all wetland acreage) of important fish and wildlife habitat in US wetlands. Although figures of wetland losses are uncertain, an estimated 568,800 acres (7.1%) of habitat have been lost.

Note: The National Fish and Wildlife Service (DoI) is working on a two-part inventory of the US wetlands, including a statistical survey and map series. Some of the maps are already available; the statistical survey should be ready by 1981.

BARRIER ISLANDS

are among the most valuable and fragile coastal resources, protecting mainland development along the Atlantic and Gulf Coasts. According to the Report of the Barrier Islands Workshop (US DOI-HCRS), 153 islands and island groups (1,018,990 hectares) are strung out along the Eastern seaboard of the US. Due to their location and relative isolation, barrier islands are popular sites for recreation and development. Federal and state governments hold 47 islands (31.3% of the total acreage) in the public trust as parks and wildlife preserves, effectively protecting those areas from further development. State governments also own two undeveloped islands. Five islands are used by the Federal government for military facilities. Private interests control 90 islands (83.7%), 60 of which have already been developed to some extent; the others may be developed at some future time. Four other islands are under quasi-public ownership, held in protective trust by the Nature Conservancy.

Land use and land-cover statistics compiled by the US Geological Survey show 92,546 hectares (14%) of Atlantic and Gulf Coast barrier islands as urban or built-up land, a 55,957 hectare (153%) increase between 1945 and 1975. In that period, 19,026 hectares of Florida's barrier islands were developed, an increase of 208%. The Eastern Gulf Coast had a 302% (11,429 hectare) increase in built-up island acreage, and an additional 10,498 hectares were developed on Mid-Atlantic barrier islands (a 99% increase). Urban barrier island acreage in the New England region increased by 47% (2,705 hectares). Agricultural land, range-land, forest land, wetlands and barren land acreage decreased by 66% for all Atlantic and Gulf Coast Barrier islands.

LOCATION OF BARRIER ISLANDS BY REGION

	acreage	percentage of total
NORTH ATLANTIC	159,670	15.28

6.	Winnapaug Pond Barrier	(BB)	3.2	360
	<u>New York</u>			
7.	Westhampton Barrier Beach Island	(BI)	2.5	146,000
8.	Fire Island	(BI)	72.0	3000
9.	Jones Beach Island	(BI)	15	6100
10.	Long Beach Island	(BI)	30	4500
	<u>New Jersey</u>			
11.	Sandy Hook	(BB)	9	3700
				900
				U.S. military reservation; heavy private development in south

		<u>Beachfront (Miles)</u>	<u>Area (Approx. Acreage)</u>	<u>Status</u>
<u>New Jersey (cont.)</u>				
12.	Point Pleasant Beach	(BB)	23.5	3000 Private and developed; one large state park
13.	Long Beach	(BB)	21	1900 Private recreational; urbanized
14.	Atlantic City	(BI)	8.1	600 Completely urbanized
15.	Seven Mile Beach	(BB)	7.7	500 Private recreational; urbanized
16.	Cape Henlopen	(BB)	13.6	1800 Two urbanized areas; large state park
<u>Delaware/Maryland</u>				
17.	Fenwick Island	(BI)	12.8	3900 Delaware portion in state park (1000 acres); Maryland portion is Ocean City; urbanized
<u>Maryland/Virginia</u>				
18.	Assateague Island	(BI)	35	18,400 Maryland portion in state park and National Seashore (8400 acres); Virginia portion in National Wildlife Refuge
<u>Virginia</u>				
19.	Wallops Island	(BI)	62.5	37,100 NASA launch complex; also educational uses
20.	Assawoman Island	(BI)	3.5	1500 Private and undeveloped
21.	Metomkin Island	(BI)	7	1400 Private and undeveloped
22.	Cedar Island	(BI)	7	2100 Private and undeveloped
23.	Parramore Island	(BI)	8.5	6000 Owned by Nature Conservancy

		<u>Beachfront (Miles)</u>	<u>Area (Approx. Acreage)</u>	<u>Status</u>
<u>Virginia (cont.)</u>				
25.	Cobb Island	(BI)	6	3000
26.	Wreck Island	(BI)	4	1000
27.	Ship Shoal, Myrtle, and Smith Islands	(BI)	11 (total)	4500 (total) Three small islands; owned by Nature Conservancy

93.	Amelia Island	(BI) 13	12,000	State and private; parts heavily developed
94.	Talbot Island	(BI) 7	8,900	State park; also private undeveloped area
95.	Anastasia Island	(BI) 12.3	12,000	Private and heavily developed, with large state park
96.	Hutchinson Island	(BI) 22	6,000	Private and developed
97.	Jupiter Island	(BI) 13.8	3,000	Private; one-third developed

		<u>Beachfront (Miles)</u>	<u>Area (Approx. Acreage)</u>	<u>Status</u>
<u>Florida (cont.)</u>				
98.	Seven developed islands: Palm Beach to Miami Beach	(BI)	80.5 (total) 28,000 (total)	All seven islands urbanized
99.	Key Biscayne	(BI)	4.5	2000 Private and developed; large country area
100.	Marco Island	(BI)	5.7	6000 Private; most areas developed; further development planned
101.	Esteros Island	(BI)	6.8	2300 Private and developed
102.	Sanibel Island	(BI)	10.6	11,000 Private, with several developed as areas; large federal and smaller local and private preserves
103.	Captiva Island	(BI)	4.8	1000 Private; and partially developed as
104.	North Captiva Island	(BI)	3.9	900 Private, with little development as
105.	La Costa Island	(BI)	6.8	2500 Private and developed; federal and state areas; no access
106.	Gasparilla Island	(BI)	6.6	1800 Private, heavily developed in two areas
107.	Bocilla Island	(BI)	6.6	1200 Private, with little development as
108.	Manasota Key	(BI)	9.7	1700 Private and developed
109.	Casey Key	(BI)	6.9	800 Private and developed
110.	Sarasota Key	(BI)	7.2	2500 Private and heavily developed
111.	Lido Key	(BI)	2.4	500 Private and heavily developed

		<u>Beachfront (Miles)</u>	<u>Area (Approx. Acreage)</u>	<u>Status</u>
	<u>Florida (cont.)</u>			
113.	Anna Maria Key	(BI) 7.4	2000	Private, with heavy residential development
114.	Mullet Key	(BI) 5.5	1000	County park
115.	Cabbage Key	(BI) 2.7	300	Half county park; half private, <i>✓</i> with little development
116.	Long Key	(BI) 5.3	1000	Urbanized
117.	Treasure Island	(BI) 3.3	400	Private and developed
118.	Sand Key	(BI) 13.5	1700	Private and developed
119.	Caladesi Island	(BI) 3.8 (total)	1100 (total)	Two state islands; undeveloped
120.	Anclote Keys	(BI) 0.5	1000	State recreational area and federal preserve <i>✓</i>
121.	Day Island	(BI) 6.6	3000	Private, with light to moderate development
122.	St. George Island	(BI) 30	12,500	Private, with small residential development
123.	St. Vincent Island	(BI) 8.2	13,600	In National Wildlife Refuge <i>✓</i>
124.	St. Joseph Spit	(BB) 9.8	4000	State park
125.	Crooked Island	(BI) 9.9	25,300	In Air Force Base
126.	Shell Island	(BI) 4.6	1500	State park
127.	Santa Rosa Island	(BI) 48	9200	In federal and state protection areas
128.	Perdido Key	(BI) 14.5	2600	Part in National Seashore; part <i>✓</i> with some development

		<u>Beachfront (Miles)</u>	<u>Area (Approx. Acreage)</u>	<u>Status</u>
	<u>Alabama</u>			
129.	Dauphin Island	(BI) 14	3500	Private; one-third developed
	<u>Mississippi</u>	31.5	13,000	
130.	Petit Bois Island	(BI) 7	1300	Undeveloped (apparently in preserve)
131.	Horn Island	(BI) 13.5	4300	National Wildlife Refuge
132.	Ship Island	(BI) 7.2 (total)	1400 (total)	Two undeveloped islands (apparently in preserve)
133.	Cat Island	(BI) 3.8	2500	Private and undeveloped
	<u>Louisiana</u>	173.8	11,900	
134.	Chandeleur Island	(BI) 29.7 (total)	2200 (total)	National Wildlife Refuge
135.	Grand Grosier Island	(BI) 5	600	In National Wildlife Refuge
136.	Breton Island	(BI) 5.6 (total)	600 (total)	Two islands; in National Wildlife Refuge
137.	Pelican Island	(BI) 4.5	300	Undeveloped (apparently private); several pipelines
138.	Bay Cheinere Ronquille	(BI) 3.9	500	Undeveloped (apparently private)
139.	Grand Terre Islands	(BI) 6.2 (total)	800 (total)	Two undeveloped islands (apparently private)
140.	Grand Isle	(BI) 4	2300	Private, parts urbanized
141.	East Timbalier Island	(BI) 6.4	600	State preserve; some oil facilities
142.	Timbalier Island	(BI) 5.2	2000	Undeveloped (apparently private); several oil facilities

		<u>Beachfront (Miles)</u>	<u>Area (Approx. Acreage)</u>	<u>Status</u>
	<u>Texas</u>			
144.	Bolivar Peninsula	(BB) 365.2	259,000	Private, with little development. Some spoil lands; many pipelines.
145.	Galveston Island	(BI) 60.5	39,000	Urbanized in northeast; remainder has little development
146.	Folletts Island	(BB) 29	27,000	Undeveloped (apparently private)
147.	Cedar Lakes Barrier Beach	(BB) 14.6	2000	Mostly undeveloped; one urbanized area
148.	Matagorda Peninsula	(BB) 18.8	4000	Undeveloped (apparently private)
149.	Matagorda Island	(BB) 48.7	22,000	Air Force Base and Gunnery Range; range to be converted for recreation
150.	St. Joseph Island	(BI) 37.5	39,000	Undeveloped (apparently private)
151.	Mustang Island	(BI) 20	28,000	Urbanized at north end; state park in south
152.	Padre Island	(BB) 19.5	70,000	Most in National Seashore; north and south tips developed
153.	Brazos Island	(BB) 7.6	3000	Most private and undeveloped; large state park

(outline of available data attached.)

LISTING OF COMPAS VARIABLES

I. VARIABLES COMMON TO ALL COMPAS DATA BASES:

Area
State
WMO Coordinates
Cross Reference No.

II. VARIABLES SPECIFIC TO EACH COMPAS DATA BASE:

<u>File No.</u>	<u>File Name</u>	<u>Variables</u>
1	OCS Platforms	Lease operator name Platform ID No. (assigned by USGS) USGS Area Jurisdiction (Federal/State) Miles to shore Water depth (feet) Year installed Year removed Date of first production No. of satellites No. of slots drilled Status -- Exploratory -- Production -- Workover -- Idle -- Abandoned Type of production -- Gas -- Oil -- Water -- Condensate Means of product transfer -- Pipeline -- Tanker Offshore storage & treatment? (Y or N)
2	Sand and Gravel Mining Sites	Operator name COE District Miles to shore Purpose -- Beachfront restoration -- Construction Size of tract to be mined (MI^2) Type of material -- Sand -- Gravel -- Sand and gravel -- Shells Volume of material (1000 cu. yds.)

<u>File No.</u>	<u>File Name</u>	<u>Variables</u>
2	Sand and Gravel Mining Sites (continued)	Status -- Permit application -- Operational -- Operation suspended -- Operation completed Permit expiration date
3	Deepwater Ports	Name Status -- License application -- License award -- Construction -- Operational Owners Miles to shore Adjacent coastal states Jurisdiction (Federal/State) Safety zone radius (feet) Water depth in safety zone (feet) Capacity -- No. of ships simultaneously serviced -- Throughput (MBbls/day) -- Holding tank capacity (MBbls) Current/projected average use (No. of ships/day)
4	LNG Terminals	Name Applicant or operator Status -- License application -- Construction -- Operation Storage capacity (MMcf & MBbls) Liquefaction capacity (MBbls) Regasification capacity (MMcf) Type of plant -- Import -- Export Shipments/year Size of facility (acreage)
5	Floating Nuclear Powerplants	Name Operator Miles to shore Status -- License application for const. -- License award for construction -- License application for install. -- License award for installation -- License application for operat. -- License award for operation

<u>File No.</u>	<u>File Name</u>	<u>Variables</u>
5	Floating Nuclear Powerplants (Continued)	Power output (Megawatts) Water Depth (feet) Cooling system -- Open -- Closed Projected increase in ambient water temperature ($^{\circ}$ F)
6	Marine Point Source Outfalls	Source -- Sewage treatment plant -- Industrial (conventional) -- Industrial (toxic) Volume of effluent (MGals/day) Distance from shore (feet) County or city Water depth (feet)
7	Ocean Dump Sites	Name Material dumped -- Incineration -- Sewage -- Dredge spoil -- Construction debris -- Chemicals -- Solid Waste -- Old Wrecks Miles to shore Water depth (feet)
8	Brine Disposal Sites	Name Storage capacity (MBbls) Volume of brine (avg. MBbls/day) Status -- Proposed -- Approved -- Construction -- Operation Outfall distance from shore
9	Marine Sanctuaries	Name Originator(s) Status -- Recommended/nominated -- Active candidate -- Designated Date of designation Purpose Size (MI^2) Jurisdiction (Federal/State) Miles to shore

<u>File No.</u>	<u>File Name</u>	<u>Variables</u>
10	Estuarine Sanctuaries	Name Status -- Recommended -- Active candidate -- Designated Initial grant date (FY) County Size (acres) Purpose
11	APCs and APRs	Name Status -- in approved program -- in proposed program Sublocation (county, city, or major geological feature) Size Reason for selection
12	Critical Marine Habitats	Name Status -- proposed -- designated Sublocation Marine species Reason for selection

ENERGY

Information on energy facilities in the coastal zone is available through:

-the Coastal Energy Information System. CEIS lists all existing or proposed energy facilities likely to impact on the coastal zone. Includes location (county and state), plant size, production capacity, and employment. System is updated each fiscal year. SEE Dan Hoydysh, CEIP

-ORCA. Systems Analysis Mapping of the Eastern United States Coast. Includes Operating Nuclear Reactors (location, capacity, company, water source) and Fossil Fuel Electric Generation Plants (location, company, capacity, consumption of coal, oil and gas, water source). SEE Eric Christensen.
